Bootpart Download For Windows

[Download](#)

Bootpart Free Download

The BOOTPART utility provides a simple and fast way to add partitions to the Windows NT/2K/XP multi-boot menu. You can add a partition, a boot sector, or a bootloader. By default, it adds a partition with the MSDOS boot sector on a disk formatted with MBR or the Windows NT bootloader on a disk formatted with FDISK. It can also add a partition with the boot sector of a Windows NT/2K/XP partition on a FAT partition, or an OS/2 boot record. You can repair a boot

sector for Windows NT and 2K/XP as well. If you have no entry for the current WinNT/2K/XP and want to add it, just add the partition with the OS/2 or Linux boot sector. The BOOTPART utility includes a text file called C:\BOOT.INI that contains information about the partition that it added to the NT menu. BOOTPART adds the partition boot sector into the C:\BOOT.INI file. This file is used by the NT multi-boot to display the boot menu. If the BOOT.INI file is not found, the default entry for the current Windows NT/2K/XP will be displayed instead of the partition's name. If you have two MSDOS entries (for example DOS and DOS6.22) in the NT menu, the default entry will be the first entry, because the default entry in the NT menu is stored in the BOOT.INI file. The BOOTPART utility creates a 512-byte file that consists of a boot sector image that loads the boot sector of the added partition. This file is added to the root directory of your hard disk and declared in C:\BOOT.INI. The boot sector comes from FDFormat and

WinImage. If BOOTPART does not work, try the following order : · Boot Partition, · RewriteBoot, and · RepairBoot. · NOTE : BOOTPART WILL NOT WORK UNDER WINDOWS NT/2000/XP, because these boot procedures are using internal boot.sys file which will not work under windows. And BOOTPART is also not able to repair the boot sector when you are under Windows NT/2000/XP. So please boot your system with dos (or with FDISK) before repairing the boot sector. · If you want to change the location of the added partitions in the boot

Bootpart (Final 2022)

BootPart is a small utility. It is independant of Windows NT/2K/XP. It is a utility to add one partition in the Windows NT/2K/XP Multiboot menu. Usually, you only have an MSDOS or Windows 95 entry and one (or several) entries on the Windows NT multiboot. Bootpart lets you add partitions in the Windows NT/2K/XP Multiboot menu. You

can add OS/2 Multiboot, or Linux Partition (with Lilo) in the menu. You can also restore the Dos, Windows 95/98/Me or NT Bootloader boot sector on Fat partition. BOOTPART creates a 512 bytes file which contains an image of a boot sector that loads the boot sector of the partition. After, this file is declared in C:BOOT.INI (a text file used by Windows NT boot menu). The boot sector comes from FDFormat and WinImage. Repairing the Windows NT/2k/XP boot sector on a Fat partition Windows NT installs a boot sector that launches NTLDR and displays the Windows NT boot menu. If you lose this boot sector, BootPart can restore it. 1. boot under MS-Dos (this can be a copy of MS-Dos 6.22 on your hard disk, on a MS-Dos bootable floppy, or the "MS-Dos 7.0" included in Windows 95 (you can obtain it by pressing Shift+F5 when Win95 loads). Then, enter the command : BOOTPART DOS622 BOOT:C: If you want to remove the WinNT boot sector, you can replace it with the command "BOOTPART DOS622 BOOT:C:" or

"BOOTPART WIN95 BOOT:C:" 2. Using Windows 95 (support F4), reboot the system. If you want to add an OS/2 Partition Boot under MS-Dos (this can be a copy of MS-Dos 6.22 on your hard disk, on a MS-Dos bootable floppy, or the "MS-Dos 7.0" included in Windows 95 (you can obtain it by pressing Shift+F5 when Win95 loads). Then, enter the command : BOOTPART OS/2 BOOT:C: Add some instructions : For example : BOOTPART OS/2 "OS/ b7e8fdf5c8

· easy to use : just add a partition, · add any partition (including OS/2, Lilo or Linux), · restore Windows NT/2K/XP boot sector if lost. How to use BootPart (for DOS/Windows): ============= BootPart is a DOS program, you can start it with DOS (insect.com or MS-DOS 6.22) and run BootPart from DOS prompt (DOS only). In Vista, BootPart is an OS/2 program, you can start it with OS/2. You should start BootPart using the OS/2 Boot Manager. How to run BootPart (any OS): ================ ================ You can start BootPart manually by using BootPart.exe where bootpart.exe is the same program than BootPart. You can also add it on NT menu. How to start BootPart (Vista) ===== ========================= First, you must set your NT menu as the active menu (I suggest using Diskpart as explained in How to set default disk as boot disk in Windows XP). Then, you can start

BootPart by using BootPart.exe. BootPart Preferences:

===================== BootPart comes with several parameters, that can be modified, to make it works better in your computers. These parameters can be changed easily via the NT menu. You may use these parameters To: MSDOS address, or BOOT1 (the default), C:BOOT1, or 0. reboot option (included in all Boot Part). Exclude this Boot partition from the boot menu. AutoStart (optional). Delay time before boot, in seconds How to use BootPart (SpartaGNU/Korn shell): ============= ============================= You can also run BootPart from a terminal emulator (examples are comterm.com, minicom, screen, etc..) : BootPart [DOS or Win] (Windows NT menu). Example (DOS): Start the BootPart with DOS prompt (with new line at the beginning) BootPart DOS C:BOOTSECT.DOS Now you should change into the C: directory, in the command line : BootPart REWRITEROOT:C: You must do this

for each partition you want to add in the NT menu. After that, you can add them one by one: BootPart DOS622 C:BOOTS

What's New In Bootpart?

1- BootPart is a Windows NT/2000 boot loader for adding, editing and removing your Windows NT/2K/XP multi-boot menu. In the past, BootPart requires you to burn floppy or load EXE or BIOS file. Now, BootPart can boot from DOS or Windows 98/Me/2000 to add/edit/remove Windows NT/2K/XP multi-boot menu without burning/loading floppy disk or loading EXE or BIOS file. 2- BootPart also can repair Windows NT/2K/XP boot loader boot sector on Fat partition. In addition, you can easily add another partition to your MultiBoot menu. 3- When you remove a partition in your NT/2K/XP MultiBoot menu, BootPart can repair your NT/2K/XP bootloader boot sector. If you change the size of the partition, BootPart can repair your NT/2K/XP bootloader boot sector.

4- Just enter these BootPart commands : BOOTPART DOS622 C:BOOTSECT.622 "MS-Dos 6.22" BOOTPART WIN95 C:BOOTSECT.W95 "Windows 95" BOOTPART REWRITEROOT:C: How to read Boot.ini The Boot.ini can be accessed by: Windows 9x with EnableBoot - Disk Properties (Unicode Layout) Windows NT with Windows NT OS Loader (Download the exe here) Windows 2000 with NT Loader (Download the exe here) Windows XP with XP Loader (Download the exe here) You can also read the format of the Boot.ini from MS-DOS. Read the documentation here: for more information. Why use Boot.ini? The simple reasons to use the Boot.ini are to easily create the boot menu, to quickly access the files on the disk, to easily repair the Boot.ini if something goes wrong, and for debugging the boot process. Using Boot.ini to add OS/2 Partition to Windows NT boot menu You can use Boot.ini to add an OS/2 partition to your Windows NT boot menu. These steps will add the OS/2 partition with an automatic start to

the boot menu. This is a very simple sample which doesn't support customization of the WinNT/2k

System Requirements:

Minimum: OS: Windows 7, Vista, XP (32bit) Processor: Intel Pentium 4 or AMD Athlon XP or later Memory: 512MB RAM Graphics: Any graphics card, GeForce 5800 or Radeon X1950 or later Hard Drive: 1GB free hard drive space DirectX: Version 9.0c Additional Notes: You need to have Adobe's Reader installed to read the preview Recommended: Processor: Intel
