Saturday, March 17, 2010 Driver Booster is a terrific, yet undervalued, piece of software. It allows you to keep your computer safe and sound by examining your system settings and automatically fixing problems that may eventually damage your computer's stability. That's not the only thing the program can do, though. It gives you the option of changing your system's performance and appearance settings, as well as the capabilities of your monitor, mouse, microphone, and wireless networking. Even better, the program is free! A nice little utility that I would highly recommend to anyone Driver Booster is a great little utility that you should keep installed on your computer. It is free, so why wouldn't you want to keep it on your system? First, you have the standard protections. By scanning your computer, the program checks for viruses and other harmful threats. Additionally, it checks for threats of a more serious nature, like malware. As the official Windows Secrets website points out, the program will identify and fix problems that many other third party programs can't. There is, however, one major downside. You need to install the program Driver Booster is free to download, but the program requires you to install it before you can use it. This isn't always a bad thing, as most of the time, these types of programs are simpler to use than their paid counterparts. You will still need to install the program, though. This means you must open it and click the button labeled "Install FreeScanner." It is a small installer that will download, and install, the free driver scanning software. You don't need to click "Next" at this point. You can move right ahead and reboot your computer if you want. You won't need to do anything else after the installer is complete. Unfortunately, this process will take some time to complete. Be patient, as it may have to install a few more files to your system. It can take a couple of minutes, but you won't have to worry about a thing. Once the installer is complete, you can launch the program. Click the "Scan Computer" button to start. The initial scan will take a while. Once it's complete, the program will analyze your computer

This week has been quite the rest week. I've been in hell. The past week has been one long series of horrid meals and the most unsanitary toilet seat I've ever laid my naked ass on. Anyway, I haven't eaten in 3 days. The first two days I literally just used a clean, boring toaster bag from Target. I didn't eat anything for about 12 hours. This morning I had a snicker doodle. It was pretty enjoyable. Next b7e8fdf5c8
