Many computer users are intimidated by the amount of knowledge required to be a successful professional. But because Photoshop is widely available, you can learn to make or manipulate images at home without spending any money. As you master each set of features, you can perform more complex jobs and quickly become a professional in your own right. A few simple, hand-on exercises walk you through Photoshop's interface and many of its tools for making simple adjustments to images. The interface of Photoshop is extremely simple and intuitive. Mastering the Layers panel PhotoShop's interface features a Layers panel that contains all of the layers in the current document. A layer is a template that you can apply to an image by sliding it on top of the image with a copy mode (see the sidebar "Understanding the Layers panel and the drawing modes" in this chapter). You can always see the layers in the Layers panel, which is always the top level and is only shown if the image has more than one layer. Layers offer you an easy way to quickly organize and manipulate an image. Viewing Your Work The Preference dialog box, available under Edit ► Preferences, allows you to customize the way that the image displays within the monitor and in print. You can choose from a variety of display modes that allow you to view the image with a maximum amount of clarity, so you can accurately judge the quality of your work without having to zoom in to the actual image and see it pixel by pixel. The two most common display modes are View, which displays the image at the size used in Photoshop, and 100%. It represents the actual resolution of the image, and, as you zoom in to the pixel level, you see the image break down into squares. One drawback to View is that it may display a larger area than the actual image in the Layers panel and on the canvas, so it can make the screen or printed page appear blurry. To prevent this, choose Fit, which fits the entire image into the area currently displayed on the screen and the Layers panel (even if the image is too big to fit onto the canvas), or fit the displayed area to the canvas and Layers panel. The Image Size dialog box (View ► Image Size) offers five choices for viewing your image onscreen: 900 × 1200: An easy choice for a standard monitor, which is approximately the size of a print page. This size may not be a huge concern for print

What's New in the?

BlackBerry CEO John Chen disagrees with the decision to kill off BlackBerry Messenger. Speaking to The Globe and Mail on the sidelines of the Private Equity Conference in London, Chen said while he doesn't have an opinion of how the BlackBerry Messenger team decides to go forward, as the company's CEO he has to have an opinion on what they're doing. Chen said he met with the team in Vancouver during an overseas trade mission and spoke with BlackBerry President Frank Shaw and the team. He said Shaw told him the members of the team and former team had discussed several factors before the decision was made, including the safety of Blackberry Messages. The team made the decision to ax the messaging app without informing the top brass, according to Chen. His response to those involved in the decision? If it's that serious, we should quit. If it's that serious, we don't need to carry on. If we're trying to save resources, then we should quit. If the decision team can't come up with a better solution, we need to quit. Chen says it's important that he has the right to speak his mind. When an organization is in trouble, you need to tell it straight. You need to be honest with it. You need to set the record straight. If you can't do that, if you can't own up to mistakes, then there's a problem. You need to address the problem. Chen also says BlackBerry is in a far better place than it was one year ago, when the company was facing the most critical juncture ever in its history. He pointed to an innovation road map and suggested the company's ship has turned around. Before joining the company, Chen was CEO of SmartDevice Partners, the company that sold BlackBerry's asset package to Fairfax Financial in March. He resigned from the company in June after the deal was announced.Reduction of Vibrio cholerae and Yersinia pseudotuberculosis O-antigen in vitro.
