Most photo editing software begins with a basic interface and then adds features as the user grows in skill level. It may be tempting to jump straight into Photoshop's layers and masks, but it's important to know that they are not an essential tool for good photo editing. Once you learn how to use Photoshop's layers and masks, though, they are powerful tools for creating designs and altering your images. The layers and masks in Photoshop are easy to use and easy to learn. With layers and masks, you can

expand and contract various aspects of an image, giving you control over areas of the image that might otherwise look lost in a sea of imagery. Photo by Catherine Weibel from the Noun Project Photo by Catherine Weibel from the Noun Project Photo by Catherine Weibel from the Noun Project Photoshop has the ability to apply layers to an image. Layers allow you to easily combine layers by selecting and dragging them from the Layers palette onto the image itself. When you select a layer, you have the ability to highlight and add new details and characteristics to that layer. This is where the feature of "masking" comes into play. With masks, you can apply design elements to an image that are designed to preserve an area of an image from the rest of the photograph. You can do this by creating a

new layer that incorporates part of the overall design of the image while leaving other areas of the image intact. Photo by Catherine Weibel from the Noun Project Photo by Catherine Weibel from the Noun Project To add a layer to an image, click the Layers palette, click the New Layer button, and select the layer type that you want. (Note that Photoshop does not need to be open in order for you to apply a layer to an image.) You will then be asked to name the layer and select a layer style. You can select a drop-down menu of layer styles, or you can choose the type of effects you want by simply clicking or typing in the text field. The newly-created layer is added to the top of the layer stack. You can then edit the layer. Layers are usually either white (rejects) or black (transparent), so you can

alter the opacity of the layer. Opacity can also be changed by mixing the layers together through opacity masks. Masks can be created through the use of multiple layers and used to blend the

Thursday, December 9, 2010 Icebunny (2010) Icebunny, which premiered at the 2010 SXSW Film Festival, was shot at both the Detroit and San Francisco area. We welcome the opportunity to spotlight the new film, directed by longtime photographer/filmmaker Katherine Long, and describe why she considers it an important work. Long's first feature documentary introduces her husband (and co-filmmaker) Blake Long, and their co-parenting of their four children. When she was pregnant with the first of her four children, Long had a job as a project manager at a major bank in Northern California. After a major promotion, she

was transferred to the Detroit area, working at a different bank, when she realized that she had inadvertently signed a purchase order for a freezer-mounted camera. The first film in the series she has made about her children's childhoods, Icebunny explores questions about family life, parenting, politics, and celebrity culture. It concerns the events leading up to the American financial meltdown of 2008. That year, Long's husband was laid off from his job. Like many other couples, they began to battle over how to support their family, which led to their divorce and Long returning to the area from which she had left. "It was really this sense of rising up in slow motion out of this sort of humdrum suburban childhood, where they were the three best kids in school and they played

stickball and played at the park and they rode bikes," Long explains. "It was this sense of leaving that life for all of us and reentering the adult world and having to reevaluate the role of parent. It is more than just about the job; it is about the institution of the family as well. As the crisis began, the consequences of your actions far exceed your sense of self." Filmmaker's Statement This is the third film in my family-centered documentary series, filmed in Detroit, where my family now lives, and San Francisco, where I grew up. The premise of the series is the way that my husband and I as parents became estranged from our own kids. The first film was When the Spoke Is Cut, which was shot in Detroit in 2008 while my husband, Blake Long, was laid off from his job. The second, Icebunny, was

shot in Detroit in 2009. The film premiered at the 2010 SXSW Film Festival. With each film, I've

Luxembourg: The Luxist The unique history of Luxembourg has been shaped by its neighbors. It was Germanic tribes that first decided to settle down in the rich river valley of the Meuse, about 10 BC. Their capital was moved several times to the Rhine, but Dacia was given up for lost. Until 15 BC, when the Romans controlled the area, Dacia was the scene of a number of rebellions and invasions by Celtic tribes. About AD 200, the Romans under Emperor Septimius Severus made an alliance with the king of the area, who built his capital there.

His descendants became the limes (here, line of encampments) on the Roman-influenced model. In the 5th century, the Franks invaded and conquered, and by the end of the century, the Merovingian dynasty ruled the territory. In the 7th century, the area was overrun by Germanic tribes, and Charlemagne brought it under his control. He reigned for 30 years and introduced Christianity. When he died in 814, his children divided the kingdom into three counties. Luxembourg went to Lothair, but during the 10th century, territory was returned to Germany and was reduced to a duchy. In the 12th century, the duchy was conquered by the French. About this time, a small church was built, and the town of Luxembourg was founded. The family of the Merovingian king, Merie, was still ruling

when the Romans conquered again in the 5th century. The Merovingian kings claimed the title of duke and called themselves Roii. By AD 700, they were using the title Rex Francorum. (See map above.) The Merovingian rex died in AD 751, when his son died without issue. The duchy was then inherited by two of the Merovingian kings' great-uncles, and passed through the family until AD 840. Bishop Hatto of Metz established a castle in the Meuse river valley for the Merovingian king, who would live at the castle until the end of his life. Hatto had the church, whose modern name is Notre-Dame de Corbeil, built on the hill. When the new castle was completed, he founded the ducal capital there. The dynasty was not immediately
