Hi, my name is Kishore and my whatsapp id is 0971473679. My younger brother has recently bought a new PC. I have been helping him for the past 2-3 days to troubleshoot the problem. He had installed the xp and 7 on his new pc. The problem is that his internet browsing is extremely slow. My iphone 4s internet browsing is also very slow. I think that there is something wrong with his registry or something. My brother has asked me to post on social media and we have tried all these steps without any avail. We have tried to de-reg/re-reg all the browser. We have wiped the Dell Windows with all its tools. We have even tried the registry clean up tool that came with the windows pre-installed. We have deleted every program from the startup and have searched for error in the system. We have tried changing the size of the disk. We have tried changing the Darksiders 2
