The most classic functions of Photoshop are already available in Elements. The software also offers editing features that are not available in the Mac version, such as selections or adjustment layers. For example, the "adjustment layer" makes it possible to adjust the levels, contrast and colour of an image with one layer. 2) Adobe Photoshop Lightroom. Free, but, in our opinion, a little complex, Lightroom enables you to edit, enhance, crop, organise, and also to protect, sharpen, and edit images. 3) Adobe Photoshop Express. An online file manager designed to manage all the files on your device. 4) ArtRage. We decided to group this software because it can be used as a simple alternative to create, filter, edit, and export images. 5) Photoshop Creative Cloud is an online subscription service for photographers. It allows to use all the main features of Photoshop without having to download the full application on your computer. 6) GIMP (GNU Image Manipulation Program). We list GIMP under this tutorial because it is the most used alternative on macOS. GIMP is open-source software, widely distributed, used by many photographers and designers, and has been often used as a stand-alone photo editor. A good image editing software should offer the following features: editing tools, batch operations, and organizing. “We got the warm end of the cold chillwave,” reports the New York Times. When a high-pressure system settles down on the Atlantic coast — like the one that now has a snowstorm about to drape itself over the northeast — it brings with it a front of frigid air. This week, as the polar vortex descends on the Northeast, the high-pressure system has finally coalesced in Canada, and that’s meant a string of cold, snow-filled front cells that started in Canada and have now engulfed much of the eastern U.S., but most prominently, New York. Police have issued a warning about a phone scam involving the use of voice-altering technology. The warning comes from the Cyprus Police, who say their officers are not in the business of fraud. They say anyone who receives a call from someone claiming to be from the police should hang up immediately and contact them on 999. If the caller is genuine, the money will be returned. Officers say there are no debts involved in the scam and any creditor is a scammer. The warning comes amid claims a man was arrested after he called and threatened to put fear into the heart of the ringleader of a phone fraud gang. The man, aged 28, claims he was held captive for three days after getting in touch via the social media site WhatsApp to ask how to get money from a bank account. The message read: ‘You’ll be under my total control. I’m here with my crew. ‘You know a girl called Mum about your account. I know you have money and are scared of me.’ Sheltered for the winter is one way to put your winter garden to work. Shade garden A winter shade garden works well for a lot of perennial vegetables. The plants often survive the winter by tapping into the sun’s warmth rather than growing in the shade. To get the most from a winter shade garden, start a few weeks early. It doesn’t have to be elaborate; a collection of thimbleberry (*Erythrostemon amabilis*) is great. It will flower in early spring, attracting native bees, and its berries are a good source of food for birds. Wintercreeper (*Cryptanthus discolor*) also is a good choice for a winter garden. EntityB has a public getter and setter for some name property of EntityA. I have exposed a JPA-style interface for EntityA with a public getName and setName method. I have a unit test that instantiates EntityA with the test data, gets the value of the entity and uses setName to set a field in EntityA to the value of the method getName. I would expect this to work fine, but instead I get an exception saying that the setName is undefined. I’ve had similar issues before. At the time it was because I was using StAX, but I’m wondering if this time the problem is the casting. Here’s the relevant code: public interface EntityA { } public interface EntityB { public EntityA getEntityA(); } Then, in my test: @Test public void testAction() {
