*****Adobe Photoshop Elements:**** A lot of people use the original Photoshop and then eventually upgrade to Photoshop Elements when the user starts running into limitations of the original Photoshop. Photoshop Elements is essentially a stripped-down version of Photoshop, with a simpler interface and fewer features. It does, however, provide a lot of the same functionality that the original Photoshop provides. The advantage is that it works on Windows and Mac computers and can run on low-end computers. *****Adobe Photoshop:**** This is the full version of the program, which is used mainly by professionals. There is an official CS6 and the CC (Creative Cloud) version that you can access via the Adobe Cloud. *****Adobe Photoshop Touch:**** This is a mobile app

version of the program. It can run on low-end tablets and does a good job on Android devices and iPhones. * **iPhoto:** If you have an iPhone or iPod Touch, it has a built-in tool that does a similar job to Photoshop Touch. * **iPhoto Mobile:** If you have an iPad, it has a similar tool that is called iPhoto Mobile. * **Lightroom:** This is a program that has some similarities to Photoshop in that it has a similar raster based editing system. However, there are other features in Lightroom that are very different from those in Photoshop, such as the way that you can create albums and edit images and apply filters, as well as additional improvements to your camera-related work. * **Corel Paint Shop Pro:** This is a program that is similar to Photoshop in that it has a raster-based editing system, but with a simplified interface that has a lot of similarities to Photoshop. It also has two other tools: ImageReady and RasterBooth. * **PaintShop Pro:** This is the program that comes with a basic copy of Photoshop, minus the ability to save to a RAW file format or work with an open source RAW conversion program. It's a better value than Corel Paint Shop Pro, but it lacks several of the more advanced features of Photoshop.

Q: What is the right size of a carbon filter on a laptop power supply? I'm building a power supply for a MacBook Pro (Retina 15-inch, Late 2013). One of the things I want to be able to do is to add a filter for the output. I've read that the intake filter should be made from ceramic, and that the output filter should be carbon or graphite (source). I would like to use some type of carbon filter as it will dramatically increase the life of the filter (especially the output). I also learned that the material properties of the carbon make for low voltage differences with the input and output. The number of pores doesn't matter. However, I was struggling with the sizes. I found this illustration: (source) And thought that I would be able to use 3mm² for the output filter. However, I couldn't find a list of what size is what. I have found information on the required size for a filter on the intake, but not on the output: (source) I saw that some people use the cost of the filter as criteria, but it seems to me that the materials properties are much more important. A: There's nothing wrong with the size, so long as you are able to get the carbon granules suspended inside the cylinder; the rule of thumb is that the diameter should be 2 times the length of the cylinder. For example the pictures you posted specify a size of 3mm² for a cylinder diameter of 27mm. “Knives Out” and “The Last Detail” star Chris Evans is on a shortlist of potential new hosts of “Saturday Night Live.” “The Hollywood Reporter,” which first reported the news, said Evans is one of six men being considered for the host job. Bill Hader, Seth Meyers, Kenan Thompson and the “SNL” band One Direction are in the running as well, according to the publication. Hader and Meyers have already been cast as hosts for the 45th anniversary season of the show, which returns to NBC this weekend for its latest episode. SNL has yet to officially announce its 42nd season, which launches Jan. 17. The report did not say if any of those on the list could be officially named as hosts. A premiere date has not yet been announced either. If the host job ultimately goes to Evans, the actor and former Marvel Studios star would be the first African-American host in nearly 30 years. Hosts of the show have included Will Ferrell, Tina Fey, Dan Aykroyd, Chris Farley, Norm Macdonald and Jimmy Fallon. A purified polypeptide from the middle ear mucosa with weak protease activity suppresses *Helicobacter pylori* vacuolating cytotoxin-induced vacuolization in the rabbit gastric mucosa. *Helicobacter pylori* was shown to induce gastric mucosal lesion in rabbits. This lesion was associated with vacuolating cytotoxin (VacA) released from the bacterium. We have investigated a protective factor in a human middle ear mucosal extract against *H. pylori* VacA. The activity was tested in vitro for the protease (VacA) activity of the middle ear mucosa extract (ME). The protease activity was analysed by measuring the N-benzoyl-Phe-Ser-Pro-Tyr-Leu-Arg-Gly-Lys-NH₂ cleavage. To test the ability of the protease activity to suppress the VacA-induced vacuolization in the rabbit gastric mucosa, the extract was treated with an immobilized polyclonal antibody to the protease activity and the antibody to VacA. The results showed that the extract exhibited weak protease activity and that the protease activity suppressed VacA-induced vacuol
