Some of them have the ears folded backwards. In some cases, white rats may be only found in coastal areas. A few, which are also known as star-nosed moles, live only in the Pacific Northwest of the United States and in New Zealand, although they are often characterized as being similar to Norwegian Forest rats. Many are still part of local cultures in the Pacific Northwest and New Zealand. There is not one particular origin for white rats but there are two distinct groups. The rodents belonging to the group are often referred to as white rats, but are not always white nor do they have star-like noses. There are star-nosed rats, which also belong to the genus Rattus, as well as common rats which are otherwise referred to as Norway rats. White Rats are not as closely related to Moles as most of the other moles are to each other. They are members of the Rattus but are classified as their own family (Nesomyinae) in many classifications. There are two subfamilies and two monotypic genera. Anatomy and biology White rats are a group of small rodents, including about 200 species. White rats are distinguished by their small size, short snout, and brownish-black color with lighter grayish-white head and face. They are sometimes called star-nosed moles,
