Q: O que é matemática pura e o que ela não é? Eu vi em uma resposta em uma pergunta minha: "Existe uma matemática pura sem nada que não seja matemática", me assustei. Então: o que é matemática pura e o que ela não é? A: Não sei porque é que é assustante para você, mas se você procura na internet encontra a seguinte definição de matemática pura, que pode ter o seu significado algo diferente do que diz o texto supracitado: Meter-se só na matemática pura é fazer matemática sem passar pelo sentido ou obter algum tipo de utilidade. Todos os argumentos, processos, resultados ou intuições que não possam ser verificados em um experimento ou provas empíricas, são excluídos do dado matemático puro. Então, eu diria que a única coisa que matemática pura não é é a coisa que você não quer saber. Não tem como saber sem saber. Você passa sem saber? A: Também pode ter significado algo bem diferente do que o texto supracitado, que é um dos referências encontrados com a palavra pura nesse sentido no Wikipédia (eu fiz isso bastante e vi que minha revisão era avaliação até demais). O texto do Wikipedia até diz que "é comum dizer que algumas [matemáticas] puras são [matemáticas] teóricas, que não têm qualquer conteúdo ou raciocínio plausível". E algumas matemá

Enterprise Solutions How do you measure your business performance? How about your customer satisfaction, retention, net promoter score, and customer experience? You are a business and your business's success comes from achieving those results. As a customer you have to measure how your purchase fulfilled your needs. If you can say "I am excited about my purchase because I feel I was treated right," you can be proud of your experience. That is where you are heading to measure everything. Integrated Performance Management (IPM) and Customer Experience Management (CEM) are the tools you'll need to measure these business and customer outcomes. Success is not guaranteed, but when you make the right choices, you'll reach the goal. Shoulda, coulda, shoulda. A woman on a Queens street corner was beaten by a stranger, in part because she "shoulda" kept her mouth shut, according to police. The 37-year-old woman told cops Wednesday night that she was being approached by a man in her 50s, as she walked in the street in Far Rockaway, near Malba Avenue, when he grabbed her neck and punched her in the face, knocking her to the ground. "The woman was beaten because she did not do anything wrong and should not have been grabbed," cops said. The woman sustained "minor injuries" and was taken to Woodhull Medical Center, police said. Police located the stranger, who was described as a black man in his 50s, around the same time the assault was reported. He was sitting on a bench in nearby Mariners Harbor when cops arrived and was charged with assault and criminal possession of a weapon. Q: Is it possible to lock a file and unlock it after the contents have been swapped with a new file? I have a code that opens a file, read its contents and stores it to a buffer, and then swaps this buffer to a new file. However, the default locking system allows anyone who can open this file to read, thus corrupting the buffer. Is there a way to lock the file before opening it and unlock it after swapping it? My main goal is to not have the file corrupt without having to pay for any solutions. A: As mentioned in the comments, using `std::ofstream` in combination with a `std::streambuf` (of type `std::`
