Errata Adobe CS4 adds in a few notable changes that have important implications for the prosumer. One of the biggest changes is the introduction of the Content-Aware Fill feature. This enables you to take a photo and even edit it enough that an area of the photo is replaced with content from a different image. Some people already understand the concept and use it for work. But for those who are just starting out with Photoshop, this is a massive change. Even more interesting is that it's a free addition to the program. Take a look at this example, which comes from our 'How to Paint' how-to series. This edit shows a photo that was taken outdoors, and the user added a potted plant into the scene. He used the Magic Wand tool, and the Clone Stamp Tool to paint in the background of the photo. Photoshop CS4 enables you to use this same technique in a new way. Using the Content-Aware Fill feature in the Lens Correction feature, you can use areas of the image on the left to replace areas of the image on the right. The result is an image filled in with what's similar in the left image and adding a new area of the right image. The areas you choose to replace with the right image are not necessarily contiguous to the right area. For example, if the top area of the left image is replaced with the right image, there might not be any area of the right image in that spot. You can see that as you work on a photo. Photoshop also has a new Edit > Create Content-Aware Layer feature that works the same way. You can use it to create a new layer in a photo and set it as a content-aware object to quickly replace areas with content from a different image. In this example, you can use a shape on the left and a different area of a photo of a woman on the right to replace some of the woman's hair. Using the Selection Brush, you can create and use a selection of the woman on the right to use with the Content-Aware Fill or Create Content-Aware Layer tool. Creating Content-Aware Objects You can even use the Select > Content-Aware Fill or Edit > Create Content-Aware Layer with a selection to create a new layer with the content of the whole photo. The above example takes a photo of a man from

Q: Will my baby choke on a 7inch tablet? I had already given my 2 year old a tablet for playing games, and she already has tried eating food and found it taste funny, so I am thinking to buy her a new one 7 inch one, I don't want to buy her too large. Will the tablet be easy to choke on and harmful to her? A: I'd say that any tablet that is able to support internet functionality is of no risk for choking. Even if it's only basic functionality like internet, it will be large enough that the baby will not be able to fit into the bottom hole. I wouldn't use a large screen for that. I'd choose a small netbook, if you don't need Internet access. That is definitely a risk for choking, but the netbook screen size is small enough that a baby/toddler is able to fit into it. A: I think that a 7 inch tablet will be fine. My daughter was a little over 3 years and she was able to walk and use a small tablet. I do know that it can be hard to type when a baby takes them out, but if you plan for this, it should be ok. The only thing I would avoid would be an 8 inch tablet because it is pretty big, and then you might have a problem. A: I would say it is perfectly safe. Babies eat crumbs all the time. I know I did. There's a lot of small little particles floating around in the air, and we can actually see these things. The beta-blocker nadolol ameliorates hepatic fibrosis in rats with carbon tetrachloride-induced liver injury. The aim of this study was to determine the effects of a chronic oral administration of nadolol on hepatic fibrosis in rats with carbon tetrachloride (CCl4)-induced liver injury. Hepatic fibrosis was induced in male Wistar rats by administering CCl4 intragastrically once daily for a period of 4 weeks. Rats were administered nadolol orally (10 mg/kg/day) for the last 2 weeks of the 4-week CCl4 treatment period. Nadolol treatment significantly reduced the levels of plasma alanine aminotransferase and hydroxyproline, and decreased the number of infiltrating mononuclear

Tribal Art All the Pieces that Matter Tribal art is vibrant and appealing. Traditional motifs and designs are a great way to create art. But, tribal art has evolved and changed over time. Do you remember the Pendleton blanket, where the patterns were actually woven into the fabric? Or, how about those wall hangings that you could really just stare at? I believe that tribal art has evolved again and is once again cool, trendy and a bit different.Thomas C.
