Layers Layers are the most important part of Photoshop. Once a group of layers is created, you can edit them by overlapping them and moving them around on the layer stack. You can also add new layers and re-arrange the order in which they appear on the layer stack. This enables you to add more detail to the photo, remove details, and resize and even move the photo itself. The image can be placed on one or more layer groups. A layer group is a way to organize the different types of layers in a group that contains layers with similar functions and procedures. A layer group can be used to apply the same settings and effects to all the layers in that group, such as color or brush effects. The main areas of Photoshop are Layers, Selections, and paths and how to use these three for image processing. The image can be placed on one or more layer groups. Placing a New Layer To place a new layer, drag the layer from the New Layer dialog box or press the New Layer button. The new layer is then placed on top of the current active layer and takes its name from the layer name field in the New Layer dialog box. Creating a New Layer To create a new layer, double-click the New Layer button in the Layers palette. Photoshop opens the New Layer dialog box and automatically fills in the layer name field. If a layer has been active, you can change its name by typing it in the layer name field and pressing the OK button. If you do not change the name of a layer, it remains unchanged and can be renamed only when it is the active layer. When you create a new layer, Photoshop automatically places it on top of all the layers that have been selected. This helps you to keep a clean, well-organized picture. It also enables you to view each part of the image separately as you paint and develop. Multiple Layers To create more than one layer, first click the New Layer button in the Layers palette. Then
