These are essentially technical drawings that you use to make a particular technical or artistic concept come to life. Over the years, it has become easier to build these drawings in Photoshop, and more convenient and user-friendly solutions are being developed. ## Using the Image Trace The Image Trace feature uses the raster version of the drawing you make, and you can enhance it in various ways (such as basic alterations). As a result, you can create a very different-looking technical illustration. The features include the following: * **Adjustments** Choose an adjustment that you want to apply to the image, and it's automatically applied to the selected elements on the image. * **Opacity** Changes the opacity of the applied adjustments. * **Freeze** Also called Freeze Frame, this option keeps only one frame in view at a time. Other frames are "frozen" for later editing. * **Save Options** Choose what to do with a frozen image by choosing whether to save an image to disk or open the image in Photoshop and continue working from that image. You can get a good idea of the various tools by trying some of the examples provided by the developer. This image should open in Photoshop as a new document. Q: Unexpected "(" in Visual Studio Code This one is similar to this question with the only difference that I'm using PHP version 7.1.15 instead of 7.1.15. I am using Visual Studio Code to work with PHP 7.1.15 on macOS 10.14.6 (Mojave) and I'm facing a problem in my PhpStorm. I am using a PhpStorm 2016.1 personal version. I am using a mac's default cmd.exe (command prompt), not Powershell. I have installed Visual Studio Code and then I removed it. First when I open a.php file as source code, it throws an error: PS C:\Users\acer> php index.php C:\Users\acer\AppData\Roaming pm ode_modules\php\bin\php.exe C:\Users\acer\AppData\Roaming pm ode_modules\php\cli.js --php- config C:\Users\acer\AppData\Roaming pm ode_modules\php\bin\php-config.conf.example -q -r "C:\Program Files odejs ode.exe" ERROR: C:\Program Files odejs ode.exe: Command not found ERROR: C:\Program Files odejs ode.exe: Command not found What I can do is: Run the command manually from mac's terminal and it works. But I am looking for an alternative solution, because running the command manually on every.php file I open is a real pain. And when I try to open a new.php file (or.html,.css,.js...), it throws an error as well: PS C:\Users\acer> php -a C:\Program Files odejs ode.exe: Command not found How can I get rid of this error? I would appreciate your help. A: The code bin\php.exe --php-config C:\Users\acer\AppData\Roaming pm ode_modules\php\bin\php-config.conf.example -q -r "C:\Program Files odejs ode.exe" is incorrect and leads to the error: C:\Program Files odejs ode.exe: Command not
