A: Change the below line `html += "" + "" + "" + lang + "" + "" + ""` to `html += "" + "" + "" + lang + "" + "" + "" + "" + lang + "" + "" + ""` Q: Android: Button pressed twice Here's my problem: First the user is supposed to tap on the input field, the keyboard appears. Now while the keyboard is visible the button below should be set to pressed and if the user taps on that button, the keyboard should disappear. Before the second touch, the first touch should be still available (so i can delete the pressed status of my button). I already tried a lot but i dont know how to achieve my goal. Any tips would be highly appreciated. EDIT: I am using the following XML-Layout:
