Each layer is a separate image that floats on top of the one below it. Layers are a critical part of working with Photoshop images and provide many important functions. They allow you to organize an image into sections that act like a stack of cards. Then you can move, edit and combine the layers to build one final image. Layers also allow you to keep the image inside Photoshop or pass it on to another application. The image may be updated in Photoshop, then saved for further editing or print. Most likely, the image will be emailed to an outside service for printing, since it saves a new version of the image every time you edit it. Photoshop uses one layer as a background, a second layer for the main photo, a third for the shadows, a fourth for the color, and so on. With layers, you can add different effects to the photo, then save the new image. You can replace the main photo in its spot with other layers to build a custom image. Newer versions of Photoshop also allow you to quickly create layers by cloning images and other components. A clone layer is like a duplicate layer that has the same settings as its source. They are easy to produce, but also easy to confuse, so learn how to use them. Layers have a number of functions and features. They are included with every version of Photoshop and are used in almost all of the programs. There are several ways of working with layers, but the most important is to use layer mask, which is a way to hide and show portions of a layer. Photoshop has many functions for manipulating layers. Increase Productivity - Why it Matters Productivity is a really hot topic right now – no doubt because people are starting to become more aware of their own productivity. So it's important to take a look at it from a 'Big Picture' perspective. You probably have an idea about what it is, but take a moment to really think about what you do (or don't do) to increase your productivity. Most of us spend a lot of time in our jobs working on a project or some other set task. For most of us we go through a daily work loop in which we do some tasks, mark them off the task list, and then move on to the next. The problem with this type of workflow is it's boring and all too often is so in-depth that we don't actually do any real meaningful tasks. We do more processing on big tasks with ever-decreasing efficiency, so that in the end we do actually do less than we would have if we did the same things in smaller chunks. The problem is that most of us don't really consider that we could be increasing our productivity with tools we already have in the studio, tools that we are probably using already, but which we are perhaps not taking advantage of to the extent that we could. In the realm of Photoshop, these are a few of the most important tools to be aware of that can increase our productivity: Faster means better It is important to remember that Photoshop's most famous processing tool, the scalpel, is actually used for more than just manipulating pixels. The scalpel is very powerful for tiny, precise changes to your photo. But it's surprisingly inefficient when you're changing larger areas of image and the process is slow, which means you're making very small changes (or even not at all) and then moving on to the next small section of the photo. In the most extreme case I've seen it was a photo of a washing machine that was being emailed around with rather poor results. Each step of the processing on the photo's layers was taking several hours. If you can do an entire project at once and a lot of the work is done in one go, you can end up with massive time savings as opposed to doing it in small chunks. Adobe has a tool called Adobe Revel that performs video processing, but the key difference is that

The present invention relates to an all-purpose bathing and grooming implement for very small animals. An all-purpose bathing and grooming implement of the present invention includes a roughing element comprising handle means and a roughing surface extending substantially along the length of the implement. In a particular embodiment the roughing surface and the handle means are separate. Other features and advantages of the present invention will be apparent from the following description and from the claims. There is provided a roughing element comprising a roughing surface and handle means. Malaria remains a major source of morbidity and mortality in a number of areas of the world. One of these areas is South America, where the major threat is to the inhabitants of the Amazon Basin. These areas exhibit a cycle of seasonal asexual parasitemia due to chloroquine-sensitive *Plasmodium falciparum*. Concurrent infection with hepatitis B virus (HBV) is common. However, despite this close contact many of the residents remain free of both *P. falciparum* and hepatitis B virus. The reason for this is unknown. It is the objective of this study to determine if the chloroquine-sensitive parasite, by virtue of its interaction with HBV or the host, exerts unique influences on the dynamics of parasitemia in the Amazon Basin. WASHINGTON (AP) — The Homeland Security Department's internal watchdog on Friday announced a broad review of the department's use of a private email account to conduct government business. The inspector general's office said in a statement it will conduct a "comprehensive assessment of the extent to which information subject to disclosure laws was improperly shielded from public scrutiny" over the last six months. ADVERTISEMENT The announcement comes as members of Congress and the White House are scrutinizing how White House staffers have used private emails to conduct government business. White House officials had told agencies and departments to use official email, but an Associated Press investigation published last week found that in at least two instances, the White House sent out official messages using private accounts. The inspector general's office said it would also look into how the public-facing email accounts of senior federal officials were being used, as well as how the department vets information it receives about foreign threats to U.S. infrastructure. The statement said agencies can expect to receive requests to share the contents of their email. "These requests may raise
