The Urban Dictionary T-Shirt Name: Lonnie JD Farnfield Jr. Location: Cidco, Indiana Date: March, 1974 Time: 11:45 p.m. Date: 7/22/73 Description: The Marion County Deputy Coroner had been called to the home of Leroy Earnest, a brother of the deceased. Upon arrival at the house, the Deputy Coroner observed a suspect, James Black, in the kitchen, attempting to escape through a window. It was reported that a struggle had taken place in the kitchen between the suspect and Leroy Earnest. The Urban Dictionary T-Shirt A group of eleven basketball players were dismissed from Indiana State University by Coach Branch McCracken. The players were members of the Indiana State Basketball team. The players involved were James Bright, Russel Christman, David Evans, William Fortune, Eric Hall, Brad Baker, Chuck Dietzen, Duke Denton, Bobby Rembert, and Jack Johnson. Bruce Solomon was the team manager and vice-president of the student council. William Fortune was the student vice-president of the team. The players had resigned from the team because of the dismissal. They left the campus the night of March 26 to return home to Indiana.They were riding in the trunk of a car driven by Bruce Solomon. The car got a flat tire and the players left Solomon in the middle of nowhere in Kokomo, Indiana in the middle of the night. Solomon had been drinking. He became confused when he got lost and when the players found out he was lost they kicked him out of the car. Solomon shot and killed himself. The Urban Dictionary T-Shirt A quick note before I begin. This was not made to pervert the country's laws as much as it was made to lighten the mood of the masses. I made this because I was bored and plain old bored is a harsh word. I do not own the copyrighted material. This is a fan made joke, not a crime. I do ask that you take your time, come back, and read through the first few pages. When you get to the second page I will ask you to rate this on a scale of 1-10. Thank you. The Urban Dictionary T-Shirt "To die is less painful than to live with the sorts of opinions that govern some people in this country at this moment in time." All-new look and feel v3.2.3 The approaches described in this section are approaches that could be pursued, but not necessarily approaches that have been previously conceived or pursued. Therefore, unless otherwise indicated, it should not be assumed that any of the approaches described in this section qualify as prior art merely by virtue of their inclusion in this section. The content of a document is typically stored, transmitted and processed in the form of files. When multiple files are created from a single source document, each file typically includes a version identifier to indicate the "version" or "state" of the document. The version identifier often includes a string such as "Version 1.0" and additional information is associated with the version identifier, such as when the document was last updated. The version identifier is typically calculated based on the combination of particular metadata (e.g., author, date, etc.) and text content of the document. Often, multiple files are created from a single source document and each file has a specific role and purpose. For example, if the source document is a purchase order, then the Purchase Order file may be used to send the purchase order, whereas the Proposal and Project files may be used to create documents that "propose" or "sign off on" the transaction described in the purchase order. When multiple files are created from a single source document, it may be difficult to determine which version of a document (i.e., which file) is the current version. Therefore, different versions of the same source document may exist, even though one or more of the

Digital Camera Applications. A digital camera is a camera that does not use film. This allows the user to take large numbers of photographs on a single roll of film. The digital camera takes images with a CCD (charge-coupled device) sensor. These sensors consist of thousands of closely spaced pixels. The pixels are arranged in an array and form a digital image. When light strikes the sensor the resulting electrical current is used to create a representation of the amount of light. This current is converted into a numeric value called a "digit". In a digital camera, the digit is stored in digital form in the computer. A digital camera is also used for capturing data in connection with other equipment or tools. The future is here.
