In my server.R, I compute my predictor based on user input (A), and within an observer, I'll make calls to the updateSelectInput function to create a new reactive variable (B). I want to use observe() for (B), and updateSelectInput() for (A). This will do what I want, but I'm worried about doing it the way I'm doing it: server.R shinyServer(function(input, output) { A 1) { x
