Study chemical information in a 3D environment Zooming in and out Rotating the selected object to different angles Movies animation mode Dimension measurement of atoms Scaling the selected object Bonding distance, radius, and tolerance Undo and redo actions Create list of selected atoms Modify their properties in terms of FPS, scale, amplitude, radius, and vibration A Journal of Chemical Education News February 14, 2014 A Journal of Chemical Education is a student-run online publication intended to educate and entertain the scientific community.Q: Why does a collection gain items when the list grows in size? I have a list of type of myEnum: public class myEnum { public static List EnumList = new List(); } and a class that changes its value on add. public class myClass : INotifyPropertyChanged { private string _myValue; public string myValue { get { return _myValue; } set { if (_myValue!= value) { _myValue = value; OnPropertyChanged("myValue"); } } } public void add() { myEnum.EnumList.Add(_myValue); } } The myClass.add() seems to change the size of the list of myEnum. When I click a button that calls the method myClass.add(), the next click to another button will give me the updated value of myEnum.EnumList. This is the code of my main view: ListBox myListBox = new ListBox(); myListBox.ItemsSource = myEnum.EnumList;
