Photoshop's Fundamentals: Layers Creating an image in Photoshop starts with saving the image in a file. Then you create layers. Each layer represents an element in your image that you can work on at the same time. You add, remove, move, and copy layers, all of which will affect the overall look of your image. To save your image, you must first create a New file by selecting File=>New. The New dialog box opens, as shown in Figure 2-1. FIGURE 2-1: The New dialog box provides a basic template for opening your new files. Note that the New dialog box in Figure 2-1 opens with a Full Screen view of your image, which you can use to preview the layers you create. If the image contains text, a layer named Text appears at the top of the layers area. Any layers below the text are not visible. Any layer below the text is in the view you see in Figure 2-1. Now that you know how to save files, we need to talk about the process of creating a new image. You may find that you start with a template or perhaps choose to start with a blank file. We'll discuss both. Now that you understand the basic anatomy of a Photoshop file, you're ready to start. Begin your file-saving process by opening Photoshop and creating a new file by using the New dialog box shown in Figure 2-1, or start with a blank file. Here are the steps to follow to create a new file in Photoshop CS6: 1. **Open a new file by selecting File** ⇒ **New.** You see the New dialog box, shown in Figure 2-2, which is a handy place to make adjustments to the file before you add layers. If you're creating a new file, you can choose From Files and Folders on the New dialog box's Open dialog. 2. **
