Audio Card Drivers for Windows Mozilla/5.0 (Windows NT 6.3; WOW64; rv:39.0) Gecko/20100101 Firefox/39.0 .Change of the gene expression profile of a human embryonic kidney cell line following infection by the human coronavirus OC43. The method used in this study was to compare the gene expression profiles of the human embryonic kidney cell line 293 cells infected by the human coronavirus OC43 with that of the uninfected controls by a method of cDNA microarray. The results of the microarray analysis showed that 516 genes were up-regulated and 308 genes were down-regulated following infection of the cells by the virus, suggesting that OC43 infection causes change in the gene expression profile of the cell. The microarray results were verified by real-time RT-PCR analysis for three representative genes. It was found that OC43 infection can result in significantly increased expression of the genes encoding interferon-stimulated protein 4 (ISG-4) and the 78-kDa glucose-regulated protein (GRP78) and decreased expression of genes encoding cytoskeletal proteins and those with unknown function. It was also found that the level of ISG-4 mRNA induction following OC43 infection was approximately 32- to 100-fold higher than that following either transfection or induction by interferon. Furthermore, these results were consistent with those of a previous study of the expression of ISG-4 and GRP78 following infection by the mouse hepatitis virus, another member of the coronavirus family.

ICP 4E/ICP 2E: induction of splenic macrophage activation in the presence of endotoxin. The effect of tumor necrosis factor (TNF) on macrophage activation was studied in vitro, by monitoring the changes in the numbers of adherent/phagocytosing splenic macrophages after a 10-min exposure to endotoxin (ET). When the animals were pretreated with anti-ET or -TNF antiserum together with secondary antiserum, the numbers of macrophages increased, a phenomenon known as the endotoxin tolerance. Pretreatment with TNF alone resulted in a decrease of the number of macrophages. The significance of the latter finding is discussed with respect to the possible

association between macrophage and TNF production.Q: Ciphertext with same IV and MAC as plaintext?
