In some modes, the HyperMotion technology delivers the fastest and most precise controls of any console football game. For example, because it is so accurate, the player can deliver an instant reaction, leaving the original attacker or defender stunned and the perfect opportunity to score a goal. With a huge range of realistic player attributes, capturing the magic of the real-world football experience is a major priority for the development team at EA SPORTS. "We now have access to the full gamut of controls available with a football boot, the way players really are," said Fabio Franchi, Senior Producer for FIFA on a Microsoft Windows PC. "The biggest challenge in football simulation is making sure the controls feel right, and with the HyperMotion technology we can control each player individually, just like the real thing. "We can physically create the kinds of movement and controls that are available from studying full-range football movement. We have the data to create the most responsive and versatile controls of any football game. So now we have the tools to make it happen," Franchi said. What's new:

- **Control new free-kicks and set-pieces:** FIFA 17 introduced the ability to switch on free-kicks and corners from one of three areas: front-post, wall or side of the box. Goalkeepers can also activate these to extend your reach and direct the ball on to your team's targets. This year, we've given goalkeepers more control over the timing and distance when it comes to their set piece. In addition, you now have the option to use cushions and whips that provide an additional touch of the unpredictable.
