distributions. From the official site: KDevelop is an IDE designed for the programming of desktop applications in the C++ language. It provides a powerful set of code editor, debugger, project manager and file management tools. KDevelop runs on Linux, Windows and Mac OS X and can be used to develop applications with or without support for a graphic desktop. Although it doesn't seem to be powerful (in comparison with Eclipse, say) it does seem to be pretty much bulletproof. Although it doesn't sound like what you're looking for I'd say it's definitely worth

version 5.0 Description: "BackTrack is an operating system for security testing and penetration testing, based on Debian GNU/Linux. BackTrack, and its various flavours, are referred to as live CDs or Live Distros because, unlike traditional CDs, they are bootable, and can be run without installation. Although they are based on the latest versions of most Debian packages, they may also contain extra packages designed for security testing and penetration testing, and patches to eliminate known security problems. A major strength of BackTrack is its open-
