I use SciClone to explore my genome and compare it to large public databases. . . , . . A: The first thing to mention is that you should not run any task-switching program on the same account you're launching from. It's a bad idea anyway, but this is especially true for Windows. If you don't want to run TSC, the best solution is to run Windows in Linux. You can modify the Windows registry in a safe manner by using LINUX, and access the Windows registry in a safe manner by running in Windows. Then, you will find out that you're not limited at all, and have a real operating system. This brings me to my second point: Avoid installing software (or log in) as the SYSTEM user. Doing this will prevent you from accessing the Windows user interface in the future, and will negate the advantage you gain from running in Linux. If you need to install software, it's best to run this in a hidden-from-the-system account. The third is to know how to do a bit of research on your own. For help with Linux, you can start with and for help with Windows, and Of course,
