Neisseria gonorrhoeae is a gram-negative diplococcus that is a leading cause of urethritis, cervicitis, endometritis and pelvic inflammatory disease in women and of urethritis and epididymitis in men. In the United States alone, approximately 78,000 cases of gonorrhea are reported yearly to the Centers for Disease Control and Prevention (CDC). Despite the existence of an effective vaccine, a better understanding of the pathogenesis of Neisseria infections is required for the development of novel therapies to prevent gonococcal disease. This project employs the use of avirulent strains of Neisseria gonorrhoeae in an attempt to help define the role of macromolecules in the pathogenesis of gonococcal disease. It focuses on the role of lipooligosaccharide (LOS) in interaction with human epithelial cell lines and demonstrates that gonococcal LOS is able to bind to human epithelial cells in a pattern of molecular association that alters the pattern of cytokine secretion./* * Copyright (C) 2016 The Android Open Source Project * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * * * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS, * WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied. * See the License for the specific language governing permissions and * limitations under the License. */ package com.google.android.exoplayer2.source.hls; import com.google.android.exoplayer2.util.Assertions; import com.google.android.exoplayer2.util.MimeTypes; import java.io.IOException; import java.io.InputStream; import org.junit.Test; /** * Tests for the {@link HlsMetaHttpDataLoader}. */ public class HlsMetaHttpDataLoaderTest { @Test public void testMetaHttpDataLoader() throws IOException {

Q: Strange behaviour of IPython parallel when using multi-process concurrency I've seen many answers here (many related to ipyparallel) saying that you should use concurrency=2 to use multi-process concurrency. However, I have an observation of a strange behaviour, where the concurrency is lower than 2. I cannot reproduce my problem on IPythonlab. Observations: I have to use a large number of cores (default is 16, i.e. 2*8). If I use 8, then the concurrency is 0, and the problem is not reproducible. If I use concurrency
