Note New layers can also be created by using the New Layer button when working with a complete image. However, if you are working on a selection, you will have to select the Layers palette before you create a new layer. 3. To create a new layer, open the New Layer dialog box, shown in Figure 3.2 by clicking the New Layer button (refer to Figure 3.1). **Figure 3.2** : Creating a new layer The New Layer dialog box has the following options for layer creation: Here are the next steps for using the New Layer dialog box: \* **Type name:** This is the name that you will later give to the layer. This name will appear in your image with the ellipsis, as in the following example: Unlike the **Name** option in a regular layer, **Type name** is the name of the layer. This name will be the name of the layer regardless of how it's moved or merged with other layers. \* **Description:** This describes the layer. It's a free-form text box and is the only way to add information to the layer. \* **Position:** This determines where you want the layer to appear in your image. You can use the shortcut keys, or use the mouse to create a new layer where you want the layer to appear. You can also use the drop-down menu to choose a specific layer type and use it as your layer: \*

Q: Android Studio "projectDir" for resources I was trying to find out the "projectDir" for resources in Android Studio. In the project build.gradle, it's mentioned as: productFlavors { /\*\* Specify a custom manifest file to be used on the device. \*/ def manifestFile = "AndroidManifest.xml" /\*\* Replace R with the resource ID of the resource you want to use. \*/ def res = "R.drawable.ic\_launcher" }

What I wonder about is the "/" under res. Is it the project's classpath in some way? If so, I just assume it as in the /res/drawable folder. If this is correct, I can see that the ".png" file shows up on my android application, but does it mean the /res/drawable is the project's classpath? A: /res/drawable means the resources of the library it belongs to. In the other hand, since the package name of R.drawable is com.example.app, so, you can access the drawable file in the app's folder which is in the com.example.app package. As it's mentioned in You should always access resources from a package by using the package name and a. (dot) at the start of the path. For example, com.example.hello\_world.R.string.hello\_world. For help with working with multiple packages, see Working with Multiple Packages. However, as a best practice, it is recommended to use the /res/drawable-nodpi/ for you drawable assets.

Presentation in dicentric reciprocal translocations: comparison between ball-pen and G-banding techniques. One hundred and thirty-five patients with dicentric reciprocal translocation were analysed by means of ring and G-banding techniques. The aim of the study was to assess the concordance of breakpoint localization in the first and second copies of the rearranged chromosomes. Comparisons of the results obtained from G-banding and ball-pen analyses were performed for the whole group of dicentric chromosomes, and for each of
