Causes and trends in the use of healthcare resources of

patients with aortic aneurysm and thoracic aortic surgery in a tertiary hospital. The aim of this study was to describe the causes of hospitalization, their distribution, and the trend in the use of healthcare resources by hospitalization as a result of aortic aneurysm and thoracic aortic surgery (TAS) over time. To describe the causes of hospitalization, length of hospital stay and healthcare costs in patients hospitalizations due to aneurysm and TAS procedures between 2010 and 2015. We extracted data from the electronic medical records of patients hospitalized in the Hospital do Servidor Municipal Paulistano (HSPM) from 2010 to 2015. We found 1,585 cases of hospitalization for aortic aneurysm and TAS, and mean hospitalization time was 15.5 days, with median hospitalization time of eight days (interquartile range: five-14). The mean of global cost was 10,433.14 Brazilian reais. The number of hospitalizations for aortic aneurysm increased by 12.7%, while the number of TAS decreased by 1.9%. When analyzed by year of hospitalization, the cause of aneurysm was more predominant in patients hospitalized in the 2014 (40.8%) and 2015 (36.8%) year,

respectively. We found an increase in the number of cases of vascular diseases in all age groups analyzed. Is the rise in the use of healthcare resources due to an increase in the number of vascular diseases, or are we increasing the access? Foreign body aspiration: a survey of practices and resulting complications in the North American Pediatric S
