most of the engines here are four-stroke with each cylinder having four valves. the combustion and drive processes go on separately so that the intake, compression and exhaust cycle can all run at the same time. the bristol engine has a less powerful cylinder and a smaller bore than the more powerful engines. its 'c' class cylinder head allows for the use of fewer and larger valves per cylinder with a possible benefit in cold climate operation. this engine is the foundation of the green dragon and marsh engine line in the same size range. this compressor is equipped with a temperature controller, oil-free air condition compressor. in addition, the compressor is also a universal unit, which is suitable for all kinds of air condition compressor, including refrigerant type hx23v, 18i, 18i,18e,15a,18e,16e,16z, 17a,16s,14e,14a,6i,10e,2.2,3.3. pfc/freon refrigerant, electricity refrigerant with h5, h22. the compressor includes all kinds of refrigerant specifications, with the

refrigerant control system consisting of a micro-controller, one receiver, one pressure control valve, one detector, two solenoid valves, one high temperature sealant and one low temperature sealant. diesel fuel is an important component of power for use on ships and on land. this resource brings together the most up to date manual on fuel production and training available. the goal of this site is to keep all eim users informed on fuel processes from procurement and logistics through to distillation and gassification. stereosyst inc.
