everything from the ui to the ux depends on the final release of the game. within the confines of the game, the characters were a lot less cuter and had a lot of chunkier ugly bodies as opposed to the ones in the game. the character was quite ugly. they are just not skinny and have a lot of muscle. the story was very simple. the overall gameplay was so good that i ended up playing the game even after the completion of story mode. the story was quite simple, the gameplay was quite interesting. that is what pulled me through to the end. it was a very interesting game. my dad is a postal carrier he starts at 5am and is on his route at 7am. he gets into his truck and drives to work. he stops at one house and sends mail with the built-in stamp. he then drives on to the next. usually, he goes into the house, does his business, and leaves again. this continues until he reaches the end of the route. he does this for the entire day. if it is true that the mobile phone and mobile browser is going to outnumber those of desktop and browser then perhaps it is the time that someone needs to come up with solutions for the desktop. you would not say that you are making the desktop go away or that you are going to make this mobile thing happen. in an rpg series like diablo, the story-telling elements are often glossed over. this is because the gamers are very familiar with

the narrative and can find all the information they need on the internet. this is unlike the movie industry where the actors have to play themselves, often for close to a year. they do not know who they will be playing at any given time or what their story will be like. this is the case for a role-playing game as well.
