condition zero will have a complete damage model, which means that when you shoot, the bullets will break through the armor and flesh, and when you're hit, you'll take damage that's proportional to your health. you won't be able to revive a downed enemy, and the game will have a killcam so you'll always be able to see what happens when you shoot someone. the single-player campaign of counter-strike: condition zero is a refreshing, innovative take on single-player gameplay, and it's also the game's best feature. it's so good, in fact, that it could easily have been its own game. the single-player campaign is split into a series of linked missions. though these missions vary in length and intensity, the most challenging missions are the "perfect storm" and "special forces" missions. in order to accomplish these difficult tasks, the player must find the best way to kill their target, which may mean trying to get around their guards or using weapons with a short range. these types of challenges give the player the opportunity to figure out the best way to accomplish a task, and it's a lot more fun that way. you may have to use your brain instead of your gun and then shoot your target in the back, because your target may have a shield that you'll have to bypass. even if you do figure out the best way to accomplish a task, you may find that your target still has a few tricks up his or her sleeve. to avoid these tactics, you'll have to change tactics and think on your feet, and you'll have to use the skills that you've acquired throughout the game. you'll start with the basic counter-strike arsenal of weapons and explosives, but you'll gain new weapons as you progress through the game. depending on your weapon loadout, you'll have to either run or fight. if you have a pistol, you'll have to run, while a fully-loaded assault rifle and a rocket launcher will likely force you to fight. most of the game's weapons are based on real military equipment, and the weapons that you can unlock as you progress through the game are even more realistic. a good example of this is the m203 grenade launcher. this weapon is used by us soldiers and is known for its high rate of fire and accurate aim. the m203's rate of fire is so high that the weapon can be used in the following ways: it can be used to throw grenades, to throw grenades at a slow rate of fire, or to throw grenades while running. because of its rate of fire, it's pretty useful for clearing out buildings, and it can be used to throw grenades at an enemy and then run away while he or she is fumbling with his or her equipment. 5ec8ef588b
